

# Sunbrella®

We also offer Sunbrella acrylic which has similar performance to Recasens Recacril®. Please visit the website [www.sunbrella.com](http://www.sunbrella.com) for more details.

# Spuncrylic®

Spuncrylic® is polyester which has gone through a process called solution dyeing, which gives it very high resistance to fading from sunlight. Spuncrylic® has Ultraviolet Protection Factor of at least 50, is water repellent, and offer good stain resistance. This material has a similar performance to acrylic but at a more affordable price. There are a selection of other colours are available, please check our website or contact us for more information.

# Polyester

Polyester is a strong fibre that is resistant to creasing and keeps its shape. Polyester is not solution-dyed, so will not hold colour as well as Spuncrylic®, in time this will result in canopy fade, therefore we only offer in two natural colours.
